My Vim Configuration

Why use this config?

It's the easy way to instantly improve your vim environment! You can extend it later when you have the time... and more coffee.

How to use this config:

1. Download this zip, or clone this repository on your system.

2. Run the included install script which will clone your current vim configuration install the new one and a set of plugins then copy your previous config into ~/.vim/previous-config.

3. Run vim.

That's it!

Plugins Used in this Config

Plugins are managed by Pathogen which is super easy to use. To add your own vim plugins simply simply clone their git repo or unzip them in ~/.vim/bundle and pathogen will handle the rest.

for example to enable the nerdtree plugin:

```
'cd ~/.vim/bundle'

'git clone https://github.com/scrooloose/nerdtree.git'
```

That's it!

The plugins that this config will install by default are listed below:

auto-pairs

```
"insert or delete brackets, parens, quotes in pair"
by Miao Jiang
https://github.com/jiangmiao/auto-pairs
```
